WEBINAR

Protecting Your Information with
Microsoft Unified Labelling, Regardless
of Where it Lives

Guest Speaker: Darron Dickinson

Be prepared as Microsoft transitions to unified labelling. Unified labelling keeps important documents and emails safe from people who shouldn't see them, regardless of location. Unified labels not only help you protect company confidential information, but also plays an important role in addressing compliance obligations, such as GDPR, through a consistent approach to discovering, classifying labelling and protecting sensitive data.

It can be difficult to keep up with the rapidly evolving suite of features and capabilities of unified labelling, so this session will provide the audience a broad understanding of the capabilities and how they can use them in their daily operation.

Darron Dickinson

Darron Dickinson, MBA/MSCIS/CBE, is a Principal Consultant with Cohasset. He has over 20 years of experience in operational and technology leadership roles in major national banks. Darron has led the design and implementation of numerous organization-wide transformation projects, resulting in increased efficiency and improved controls. His most recent projects focus on digital transformation leveraging cloud, cognitive and blockchain technologies, and their potential to automate and streamline information life cycle management. Darron co-leads compliance assessments of vendor solutions in comparison to the WORM requirements stipulated by the Securities and Exchange Commission Rules 17a-4(f).
